

Total Recorder Professional V7.0 is better than ever

High Criteria Inc., June 02, 2008

URL: <http://www.pr9.net/comp/software/8292june.html>

High Criteria Inc. today announced the release of Total Recorder Professional Edition Version 7.0, a multi-purpose audio recording program with a wide range of editing and sound processing features.

PR9.NET June 02, 2008 - Canada/Ontario - "A cult favorite, Total Recorder impresses not only with its interface and list of features but with its precise ability to record and save any sounds coming across your PC....." - Troy Dreier, PC Magazine.

Anyone interested in recording streaming audio, wishing to record Internet telephone calls or any other sound passed through PC, will find Total Recorder a powerful, yet easy-to-use audio recording application. The program provides many powerful functions for the recording, converting, editing, and processing of sound. A powerful scheduler is included that can start recording while your computer is in standby or hibernate mode and can also connect to your favorite radio station automatically.

Total Recorder supports free and trial add-ons that can be used for video recording, sound enhancements, mixing operations, integration with iTunes/iPod, and for other purposes. Refer to the Add-ons page for information on the add-ons available. All of the Total Recorder features are documented at http://www.totalrecorder.com/productfr_trPRO.htm

Total Recorder Version 7.0 is fully compatible with Windows Vista x32. In this update, a number of Direct Sound compatibility issues have been resolved including those that will allow the use of Total Recorder with Skype 3.x.

What's new in Total Recorder

The Professional Edition V7.0 includes the following new features:

- The ability to export/import Total Recorder's configuration settings or scheduled jobs. This is useful if you need to reinstall your system, move Total Recorder from one computer to another, or for backup purposes.
- Playback and background recording (capturing) of Internet-broadcasts in MP3, WMA, and Ogg Vorbis formats without using an external player, thus avoiding decoding and re-encoding.
- Timeshifting lets you record an audio file and listen to it (from any position) while the file is being recorded. This feature is available for both ordinary recordings and when background recording Internet streams.
- Total Recorder supports for CUE-sheet files that contain information about the tracks in a media file. You can create cue-points and use them for splitting a file afterwards.
- Other minor enhancements.
