CED Engineering is a fully automated user-friendly learning center that offers continuing education courses for professional engineers all around the world.

PR9.NET June 08, 2008 - Pomona, NY – CED Engineering is a fully automated user-friendly learning center that offers continuing education courses for professional engineers all around the world. Due to the growing need for their services, the company has hired 2 new to meet the expanding demand.

CED Engineering prides itself on being very selective with their course providers to ensure that their education and practical experiences are in alignment with the company's objectives. Most of the course providers are licensed professional engineers, while others have advanced degrees in addition to their education and work experience. The CED Engineering course providers are certified and highly qualified to teach their courses, adding to the overall learning experience of the students.

"Our courses are designed with a clear purpose and objective to maintain, improve, or expand the skills and knowledge relevant to the licensee's field of practice. Our courses comply with the NCEES CPC Guidelines and are considered accepted courses by all State Licensing Boards requiring continuing education," says one of the company directors.

The courses are offered online and are easy to work into any schedule. In addition to educational information, the courses also provide professional quizzes to evaluate the engineer's effort in the courses, and to strengthen and maintain competency in the technical, managerial and ethical fields.
