*Inkcups Now introduces one color tabletop pad printer machine for decorating promotional products and printing tags to replace thermal transfer labels on tagless t shirts.*

PR9.NET June 18, 2008 - Boston, MA - Inkcups Now Corporation has recently introduced ICN-B100 sealed cup pad printer machine, a single color compact tabletop printer manufactured for demanding heavy duty performance. The B100 has a robust pad compression capability of 120 lbs at 80 PSI. An illuminated plate system provides visibility to the work area; the variable inking and print frequency controls allow the operator to regulate print opacity.

This tabletop pad printer machine handles items as tall as 4.25 inches in height, including the part fixture. In addition to promotional products, medical and electronic devices, it is perfectly suited for printing apparel tags that today are rapidly replacing thermal transfer labels in the apparel manufacturing industry. This pad printer machine can be easily set up for efficient printing on tagless t-shirts and other textile items.
