Viaflo wins the LabAutomation 2008 New Product award for their Vision family pipettors.

PR9.NET June 20, 2008 - Hudson, NH - Viaflo (www.viaflo.com) is a pleased recipient of the LabAutomation 2008 New Product award for their Vision family of handheld, single and multichannel electronic pipettors. The New Product award recognizes a series of pipette innovations introduced the Vision series that improve accuracy and lab automation through improvements to the classic pipettor interface.

Additions to the Vision product line includes a large customizable, multi-color display, a 12-channel 1250µL pipettor, Bluetooth wireless PC connectivity, and live multi-language help menus. Vision pipettors are the first to feature a unique Touch Wheel controller for intuitive and fast menu navigation, making possible the fastest volume selection in the world. Pipettors feature a rechargeable lithium-ion battery, unsurpassed ergonomic design and well balanced weight for comfortable and productive pipetting. Improved tip stability, minimized attachment and ejection force are made possible by Vision's Tri-Lobe tip attachment mechanism, creating an extremely consistent and reliable tip-to-pipettor seal.

The Vision single channel model supports five volume ranges from 0.5µL to 5000µL. The four different 8 and 12-channel models support maximum volumes of 12.5, 125, 300, and 1250µL. The 16-channel model has available maximum volumes of 12.5 and 125µL. Vision is one of the many new products developed and sold by Viaflo where imaginative liquid handling solutions become real.
