With just a little reading you too can find out how to construct a simple device that uses water as fuel to boost your mpg.

PR9.NET July 01, 2008 - Los Angeles, CA - Using water as fuel in addition to gasoline has become a reality in 103 countries thanks to Ozzie Freedom. Freedom has written an ebook using an 85-90 year old technology that shows you how to use water as fuel in your vehicle which supplements the gasoline/ diesel fuel using a simple yet effective device. He claims that for under \$200.00 you can build one of these water as fuel devices and install it in your vehicle resulting in fuel savings with an average increase of 59% mpg with some users even reporting increases of 82% or more. There are now at least 10 thousand vehicles on the road using the water as fuel technology and it's currently available in 103 countries. Real life demos are taking place on Saturdays from 12:00-1:00 in Woodley Park, Van Nuys, Los Angeles if you happen to be close enough to drop in. Folks show up to share what they've learned, to teach others and to show off their water as fuel cars that are already using this system.

Another big bonus for people using this system is the reduction of greenhouse gases. Since you're burning a percentage of water as fuel instead of gasoline/diesel you not only increase fuel economy and performance but when the water is burned it's converted back into plain water and oxygen resulting in decreased emissions. One man reported that he was able to easily pass the emissions test with no catalytic converter on his car.

This water as fuel device is constructed from some simple parts which can be found in your area or purchased over the internet for little money or when you purchase the e-book you also get access to a network of other customers who can help with parts or kits. If you find you absolutely cannot install one of these water as fuel devices by yourself then a little help from your local mechanic should solve the problem.

Ozzie has been using the fuel as gas technology in his vehicles for the last two years and started out trying to install them for others but the demand became too big and he wrote the ebook so that others could install them on their own.

To find out more about how you can save money, boost your engine performance and help clean up those nasty greenhouse gases using a water as fuel device go to <http://www.turnwaterintopower.com>
